Independent software product builder, turning ideas into revenue-generating solutions by solving technical complexity and go-to-market challenges while delivering high ROI and measurable business growth.

Experience

November 2008 - Present

Senior software developer at Erudika, Sofia, BG

- End-to-end design, implementation and operations of scalable, production-grade APIs, platform services and integrations used by Fortune 500 customers.
- Created Scoold - a widely used open-source Q&A and knowledge management platform for teams
- Created Para - end-to-end design and development of the open-source backend server.
- Created Para Cloud - the backend-as-a-service (BaaS) alternative to Supabase, Firebase & Parse.
- Completed several B2B contracts with Connect2id. Architected and built the Connect2id SaaS platform from the ground up, using AWS Lambda, CloudFormation, CloudFront, DynamoDB and Cognito to deliver a scalable cloud-based identity service based on OIDC and OAuth 2.0.
- Multiple open-source contributions to projects like Lucene, Elasticsearch, Astro, et al.

June 2014 - July 2014

Web developer at Lexoo.com (now Kalexius), London, UK
Helped a UK-based startup with the initial prototyping of an online system for connecting lawyers and clients.

October 2006 - November 2008

Freelance software developer
Completed several small website projects for local clients.

2003 - 2006

IT and Support intern at Atridi Group, Sofia, BG
Helped with server and network administration and provided support for all internal IT systems.

Education

2006 - 2007

MSc. Management, The University of Sheffield, Sheffield, UK

2002 - 2006

BSc. Computer Science, Class II Division 1 honours, The University of Sheffield, Sheffield, UK

Skills

- **Heavily business-focused** and aiming to provide maximum value with minimum technical debt and complexity.
- **Comfortable wearing multiple hats at once** - developer, business owner and talking to customers for tech support and sales.
- **Experienced in AI-assisted software development** workflows using Claude Code, Codex and OpenCode (multiple LLMs).
- **Maker at heart** and used to owning and shipping software products end-to-end.

Technical expertise

- **JVM ecosystem:** Extensive experience with Java SE, Java EE/Jakarta EE and Java Swing, from core platform APIs to the design, implementation, testing and production operation of distributed systems. Experienced with Spring, Spring Boot, Spring Data, Spring Security and Hibernate, and with building and deploying production Spring applications.
- **Backend and APIs:** Designed and developed backend services, REST APIs, reusable platform services and integrations with internal and external systems. Experienced with HTTP, API design, business logic, authentication and authorisation, OIDC, OAuth 2.0 and JWT-based security.
- **JavaScript and Node.js ecosystem:** Proficient in JavaScript for browser and server-side development, with experience building Node.js services, APIs, tooling and integrations. Comfortable working with TypeScript and learning new JavaScript ecosystem tools quickly.
- **Web platform:** Strong understanding of the complete web stack: semantic HTML5, CSS, responsive layouts, browser APIs, asynchronous JavaScript, HTTP, web security and client-server integration.
- **Frontend development:** Experience with vanilla JavaScript, Angular, React and Astro, including reusable components, frontend application architecture, API integration, build tooling and deployment.
- **Data and persistence:** In-depth experience with relational and NoSQL databases, including PostgreSQL, MongoDB, Cassandra and DynamoDB. Experienced in data modelling, schema design, query design and optimisation for distributed applications.
- **Cloud and delivery:** Designed and operated a production backend-as-a-service on AWS. Familiar with Docker, Kubernetes, Helm, Git workflows, CI/CD pipelines and automated software delivery. Able to integrate frontend and backend builds into repeatable delivery workflows.
- **Engineering practice:** Write clean, efficient, scalable, testable and maintainable code. Apply modular design, common design patterns, automated testing, secure development practices, code review, monitoring and observability to production systems.
- **Product and collaboration:** Experienced in requirements and design discussions, technical documentation, test documentation, stakeholder communication and working independently or as part of a team. Strong analytical and problem-solving skills, with a practical, results-oriented approach.
- **Open source and adaptability:** Long-term experience designing, developing, releasing and supporting open-source software, including Scoold and Para. Able to ramp up quickly on new languages, frameworks, platforms and tools when required.

Hobbies and interests

- Cycling, 3D printing, building custom small form factor PCs

Languages

- English, Bulgarian, Russian (limited working proficiency)
